

Meet Eve, your agentic finance manager

You can ask Eve questions as you would an accounting AI chatbot, and she does more: she builds your business context, assigns the agents and brings decisions to your Inbox. She cannot approve her own proposals or post journals.

Published 12 October 2026

Eve is how you work with Rever. Rever calls her your **agentic finance manager**: one accountable coordinator who understands the business, allocates work across the ledger and keeps important financial issues moving. She sits above **the fifteen specialist agents**, gives them the context they work from, and brings their findings to your team. She has four duties and a short list of things she cannot do.

What Eve does

Understand your business. Eve builds and refreshes a profile of the business from cited financial and operational evidence: revenue models, growth, parties, significant ledgers and financial priorities, along with your systems, commercial terms and accounting policies. If the records are silent, she asks your team targeted questions.

Organise the work. Eve traces each financial line back to the business activity behind it and forward into the books, then drafts an SOP and a flowchart for the process. The process owner confirms it before any agent uses it. Each ledger, party and transaction family gets one lead agent and named supporting agents, and Eve dispatches approved duties when a new invoice, contract or ledger change arrives.

Bring decisions together. Eve sequences questions by materiality, risk, how long they have waited and how far she trusts the source, and she escalates a serious issue whatever its size. High-value opportunities, urgent liquidity concerns and failed procedure tests reach you as a linked finding with an Inbox task wherever a decision is needed.

Improve performance. Eve reviews agent output, watches for stalled handoffs and brings in Steward when a connector blocks the work. If a pattern recurs, she proposes a change to an SOP or a role and publishes it only after approval, keeping the previous version. A new agent starts as an observer, and Eve promotes what performs and demotes what does not. Describe a routine no product ships and Eve can build an agent for it in **Agent Studio**, in early access on Growth Pro and Enterprise.

Ask her a question, as you would an accounting AI chatbot

Eve answers finance questions from the current workpapers and Records. Ask which rebate claims are still open and why, or what moved in an expense line this month, the kind of movement a **flux analysis** explains. If a source is missing for part of the period, or two records disagree, she says so

and names the gap. Rever puts it this way: she explains "uncertainty, conflicts and coverage gaps rather than presenting an assumption as a conclusion."

What Eve cannot do

Eve coordinates the work, and she does not replace a specialist's conclusion or your approval. She cannot approve her own proposals, create invoices, post journals, move money or bypass the agent responsible for an action. Journal prepares entries and invoices, and after a person approves them in the Inbox, approved entries come back as an import file your team loads. A request to a vendor or a customer waits for your Inbox approval too, and Eve keeps the reply in Records.

Start with Eve on the Free plan

Rever's Free plan is the self-serve zero-day scan, with Eve answering questions about the scanned data only. Try Rever Free at console.rever.ai connects your ERP, banks and documents read-only, runs the scan on the data you connect and shows the initial findings with their evidence. The Free plan has unlimited users and runs on Rever's managed cloud.

Business context, the specialist agents, Inbox actions and workbooks come with Growth, and [Rever's pricing](#) is set after a free Proof of Value on a limited period of your data.

Questions

Is Eve an accounting AI chatbot?

You can ask Eve questions in plain language, as you would a chatbot, and she answers from the current workpapers and Records, naming any uncertainty or gap in coverage. Her main job is coordination: she builds the business profile, assigns the agents and routes each decision to your Inbox.

What does Eve cost?

On the Free plan, Eve answers questions about the data the zero-day scan reads, and nothing beyond it. Growth Basic, Growth Pro and Enterprise add business context, the specialist agents and Inbox actions, and Rever prices them after a free Proof of Value.
